

STOVE SOLUTIONS

- WOOD BURNING
- SOLID FUEL
- FLUES
- HEARTHES
- FIREPLACES

RGS are fully accredited to supply and install log burners and open fires, offering discerning home owners a range of 'warming' solutions and styles to suit most rooms and living spaces

HETAS is the official body recognised by the government to approve solid fuel domestic heating appliances, installation, fuels and services. Its work in approving products covers stoves and open fires and also lists in its official guide, factory made chimney and carbon monoxide detectors and alarms suitable for use with solid fuel. It lists approved installers too.

LEGISLATION

From the 1st April 2002 the installation of a solid fuel appliance must be installed by a 'skilled engineer' who is authorised under the registration scheme for companies and engineers involved in the fitting and maintenance of domestic solid fuel equipment as operated by HETAS Ltd.

FITTING

Solid fuel appliances must be installed correctly with the correct ventilation and flue design to ensure safe use. When fitted correctly the appliances will provide many years of safe, practical heat. A flue liner is necessary in the majority of cases and brick chimneys will always need to be lined. If the appliance is not issued with an installation certificate then your insurance is unlikely to be valid in the event of a problem.

***Treat your stove as you would a gas boiler.
Use an experienced licensed engineer for
installation and maintenance.***
